

Snoring/Sleep Apnea Appliance's Tongue-Repositioning Feature Cited

TONAWANDA, NY—Great Lakes Orthodontics' new, clinically proven MPowRx Snoring

and Sleep Apnea Appliance treats chronic snoring and sleep apnea by repositioning

the tongue forward instead of relying on the mandible. A unique, non-custom appli-

ance, it uses gentle suction rather than the alveolar ridge or dentition to stay in place,

and it allows patients to swallow comfortably.

Ideal for multiple patient types, including those who are endentulous, those with periodontal problems, those with complicated dentition, and those in combination therapy with CPAP, the appliance is easy to insert, maintains its shape, and is offered in one size that fits most patients. No impression is necessary. For more information, call **Great Lakes Orthodontics** at (800) 828-7626 or visit greatlakesortho.com.
